

Connecting a single computer to the internet using Devolo DSL+ 1100 LAN Modem

Step 1: Connect Hardware

- Connect the AMT port of the DSL splitter (provided by TKS) to the telephone wall outlet using the cable coming with the DSL splitter
- Remove the rear panel of the Devolo DSL+ 1100 LAN Modem.
- Use the included AC adapter to connect the DSL+ 1100 LAN to a power outlet.
- Use the included gray DSL cable to connect the 'DSL' port of the Devolo DSL+ 1100 LAN Modem to the DSL port of the DSL splitter.
- Use the included yellow network cable to connect the 'ETH' port of your DSL+ 1100 LAN to the network port of your computer.
- Boot the connected computer. After restart the 'ETH' LED on the device should now be lit.
- Continue by setting-up a broadband connection on your computer.
