SETUP GUIDE | easyConnect [DSL]

FRITZ!Box 7490

1. Connect to a power outlet.

Connect the supplied **AC adapter** to the FRITZ!Box's **POWER** port and then to a suitable AC power outlet. The green **Power/DSL** LED will begin flashing, indicating that the device is powered up.

2. DSL connection.

Connect the supplied **DSL cable** to the socket labeled **DSL/TEL**, plug the other end into the center slot of your TAE telephone receptacle.

The FRITZ!Box will then automatically self initialize, this may take a few minutes.

IMPORTANT: DO NOT INTERRUPT THIS PROCESS!

Your FRITZ!Box is ready for use when the **Power/DSL** LED stops flashing and remains lit, and when the **Info** LED is illuminated.

3. Connect your telephone and computer.

Plug a standard analog telephone into the **FON 1** socket on the back of the FRITZ!Box, or into the German TAE socket labeled **FON 1** on the side of the device. Use one FON 1 socket or the other – not both!

No dial tone? Hang up, wait and then retry. It may take a few minutes to establish your initial phone connection.

Connect the supplied **LAN cable** to one of the yellow **LAN** ports. Plug the other end of the cable into the LAN port of your computer. Now just launch your web browser and start surfing.

Your setup and activation is now complete!
