DSL   FON 1 FON 2 FON S₀   WAN   LAN 1 LAN 2 LAN 3 LAN 4   Power   USB

1. Connect to a power outlet

Connect the supplied **AC adapter** to the FRITZ!Box's **POWER** port and then to a suitable AC power outlet. The green **Power/DSL** LED will begin flashing, indicating that the device is powered up.

2. DSL connection

Connect the supplied **DSL cable** to the socket labeled **DSL**, plug the other end into the center slot of an active TAE telephone receptacle.

The FRITZ!Box will then automatically self initialize, this may take a few minutes.

IMPORTANT: DO NOT INTERRUPT THIS PROCESS!

The FRITZ!Box is ready for use when the **Power/DSL** LED stops flashing and remains constantly on, and when the **Info** LED is illuminated.

3. Connect your telephone and computer

Plug an analog telephone into the square **FON 1** socket on the back of the FRITZ!Box. If needed, plug in to the German TAE socket labeled **FON 1** on the side of the device. Use only one FON 1 socket or the other – not both at the same time. NOTE: Your telephone connection cable should be included with your telephone, it is not provided with this modem.

No dial tone? Hang up, wait and then retry. It may take a few minutes to establish your initial phone connection.

Connect the supplied **LAN cable** to any one of the yellow **LAN** ports: **LAN1**, **LAN2**, etc. Plug the other end of the cable into the LAN port of your computer. Now just launch your web browser and start surfing.
Your setup and activation is now complete!

FRITZ!Box 7590   **DSL CABLE**   **LAN CABLE**   **AC ADAPTER**   **FRITZ!Box Wi-Fi**

Be sure to set up a wired connection per this guide before configuring your home Wi-Fi network. Your modem's default Wi-Fi name or SSID is "FRITZ!Box 7590", the default password can be found on the bottom of the device.
